

Preface of the Series

The world is changing fast, and technology is playing a big part in how decisions are made today. One important change is the use of cloud computing in creating and managing policies. Cloud systems help governments, organizations, and businesses make better, faster, and more organized choices.

This series, **Cloud-Driven Policy Systems**, looks at how cloud technology is being used to support policy-making in different areas like public services, health, education, and more. Each book in the series will explain the ideas, tools, and real-life examples of how cloud systems help in planning and managing rules and decisions.

The goal of this series is to make these topics clear and useful for readers — whether you are a student, a professional, or just someone interested in how technology shapes our world.

As the editor, I thank all the writers and experts who made this work possible. I hope this series helps you learn more about this exciting and important topic.
